On/off ramps

Enable high-volume, low-friction conversion between fiat and digital assets

Every conversion creates a pricing and settlement gap.

On/off ramp providers sit at the intersection of two financial systems that at an infrastructure level are siloed. Cross-asset conversions require sourcing liquidity, locking a rate and settling across rails on time. Inefficient liquidity sources at conversion results in failure to win user flows or unhedged positions absorbed by the ramp operator.

Most liquidity sources were built for institutions, not thousands of retail size transactions, forcing operators to bucket risk rather than hedge per transaction. Widening spreads to absorb intraday market risk offers a workaround but destroys competitiveness when users compare rates in real-time. Most operators patch a solution together through multiple liquidity venues - the operational overhead, inconsistency and exposure this creates scales directly with the business.

The cost of inaction

- Margin compression
- Intraday market exposure
- Operational complexity
- Settlement risk embedded in every conversion

> **With Omnia, every cross-asset conversion executes in real time, at the rate quoted.**

With Omnia, every cross-asset conversion executes in real time, at the rate quoted.

Single API integration | Deep, institutional liquidity | Real-time rate lock | Retail throughput

Omnia replaces fragmented liquidity providers with one institutional engine built for retail throughput. Where fixed pricing is required, Omnia's Request for Quotation (RFQ) functionality delivers a committed rate with no added margin. No minimum trade size. No bucketed risk. No spread management across multiple venues.

How it works

User initiates conversion

Omnia streams the provider its competitive pricing to win customer flow.

Rate locked

Omnia executes the hedge at the moment of user commitment, at institutional rates. No minimum.

Zero exposure

The position is covered immediately. No spread risk accumulating across venues.

Solution scales freely

The same process repeats for every conversion. One integration. Unlimited throughput.

Key capabilities

- Real-time rate lock at execution, for trades of any size.
- RFQ for fixed pricing commitments, with no added margin.
- 24/7 liquidity across fiat, crypto, stablecoins and tokenised assets.
- Single liquidity source replacing multiple providers via API

The impact

- Locked, competitive rates on every conversion.
- No bucketed risk.
- No multi-venue overhead.
- More customer quotes won.
- Execution that scales without adding operational complexity.

Let's talk about how Omnia can integrate into your payment flows
