Wallets and custodians

Unlock secure, custody-native execution on demand.

Every digital asset portfolio adjustment brings a security and speed dilemma.

Custodians and wallets are built around security, segregation and control. The same framework that ensures safety also creates operational friction any time a client wants to rebalance a portfolio, reduce risk exposure or move into yield-generating assets.

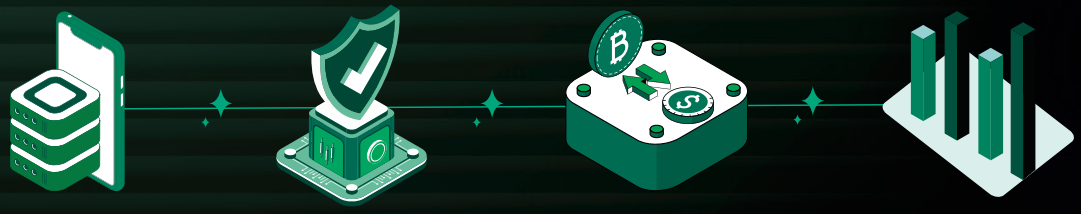

Most liquidity providers require external transfers or pre-funded accounts before they execute, introducing operational and counterparty exposure that is unacceptable for custody providers. Every rebalance becomes a transfer event. Every transfer is a compliance consideration. For institutional clients with regulatory obligations, this is a structural problem, not a minor inconvenience. Custodians absorb the overhead and risk losing clients to competitors that offer custody and execution in one place.

The cost of inaction

- Client frustrated by restrictions
- Assets under custody at risk.
- Pre-funding overhead
- Counterparty exposure

With Omnia, clients can execute from within their custody environment.

With Omnia, clients can execute from within their custody environment.

Single API integration

Custody-native execution

On-chain asset-to-asset swaps

Real-time institutional liquidity

With custody-native execution through Omnia, clients can rebalance or shift exposure without taking on counterparty risk. Every swap, rebalance and rotation generates revenue, moving custodians beyond a fee-per-asset-held model. No transfers. No pre-funding. No locked liquidity.

How it works

Client initiates a swap

A rebalance, rotation or yield allocation is requested within the custody platform. No external transfer. No pre-funding.

Omnia connects liquidity

Omnia accesses institutional-grade liquidity across the required asset pair. Any asset, any size.

On-chain settlement

Swap executes and settles via smart contract. Assets move within the custody environment. Position updated instantly. No counterparty exposure.

Revenue recognised

The custodian earns on every execution. Clients stay on platform. Assets remain under custody.

Key capabilities

- Custody-native, asset-to-asset execution via on-chain smart contracts.
- Deep, real-time institutional liquidity across crypto and stablecoins.
- No minimum trade size, rebalancing at any size.
- 24/7 execution without assets leaving the custody environment.
- Exchange-style execution within a custody-first framework.
- Full auditability and governance controls throughout execution.

The impact

- Clients rebalance and swap without leaving the platform.
- Zero counterparty exposure from liquidity operations.
- Increased client retention: no need to migrate to a competitor.
- New high-margin revenue stream on every client transaction.
- Competitive differentiation - custody and execution in one place.

Let's talk about how Omnia can integrate into your payment flows
